

IntelliSystems Earns the GTIA Cybersecurity Trustmark

A national cybersecurity certification.
A local partner you can trust.

IntelliSystems is proud to be among a select group of IT providers in the U.S. to earn the GTIA Cybersecurity Trustmark: a third-party validation of the controls, processes, and accountability we put in place to protect our clients' data and systems.

Fewer than 50 providers nationwide hold this certification. We're proud to be one of them and to deliver this level of protection with the local, hands-on support we're known for.

What Is the GTIA Cybersecurity Trustmark?

The GTIA Trustmark, backed by CompTIA, is a certification that evaluates how well a managed IT provider protects against cybersecurity threats and meets industry best practices. To qualify, providers must demonstrate alignment with standards like:

- CIS Controls
- NIST Cybersecurity Framework
- ISO 27001
- SOC 2
- CMMC and others

Annual reviews ensure continued compliance, rather than just a one-time checklist.

What This Means for Our Partners

If your IT partner isn't secure, your business could be exposed. By choosing IntelliSystems, you're working with a team that:

- Implements structured, proven cybersecurity safeguards
- Undergoes regular third-party assessments
- Understands compliance pressures in healthcare, legal, and manufacturing
- Takes responsibility for reducing your business risk

Our Commitment to Security

At IntelliSystems, strong cybersecurity is part of how we do business every day. Our clients rely on us to keep their systems running and their data secure. Earning this certification was a natural next step—one that reinforces our ongoing investment in protecting the organizations we serve.
